Summary

Full-Stack Engineer with 4+ years of experience on enterprise backup and disaster-recovery software using React, TypeScript, Java and Spring Boot. Experienced in microservices, REST APIs, real-time WebSockets, multithreading and state management. Collaborates with cross-functional Agile teams to deliver scalable, high-quality features.

Education

National Institute of Technology, Calicut (NITC)

2016 – 2020

B.Tech, Computer Science and Engineering

Work Experience

IDrive Software India Pvt. Ltd.

Aug 2022 – Present

Programmer Analyst

Bangalore, India

- Part of the full-stack team building IDrive BMR, a disaster-recovery appliance, with React and Spring Boot.
- Built a full-stack log export feature (CSV, Excel, PDF) for 4 log types using Redux-Saga, Apache POI and PDFBox.
- Refactored ~1,000 lines of export logic out of a large WebSocket endpoint into a reusable Java module.
- Contributed to the real-time WebSocket layer between React and Java for live backup progress and status updates.
- Helped strengthen WebSocket security, including a per-session key handshake and HMAC signing of critical actions.
- Worked with Redux Toolkit and Redux-Saga state management across various modules of the application.
- Delivered fixes and enhancements for restore, file-level recovery and VM virtualization screens in React.
- Added form validation, loaders and UX improvements to VMware ESXi/vCenter onboarding and settings screens.
- Collaborated on Spring Boot services for VM backup orchestration, Quartz scheduling and job tracking on SQLite.
- Fixed concurrency and data-integrity issues in parallel VM backups using atomic job claiming and locking.
- Supported VMware vSphere API integration work for VM discovery, backup and restore with changed-block tracking.
- Worked on MSP alerting for VMware and Hyper-V events, including the ConnectWise PSA integration.
- Improved session reliability with reconnect handling, keep-alive hardening and fixes for false logouts.
- Set up service auto-recovery with Supervisor and systemd; contributed to Debian packaging and CI/CD.
- Investigated and debugged production issues with the team across the React UI, Java services and Linux.
- Performed code reviews for frontend and backend pull requests, helping maintain code quality and consistency.
- Resolved 40+ UI and backend issues and merged 28 release PRs, back-porting fixes across release branches.

BDFL Technologies (The10xAcademy)

Mar 2022 – Aug 2022

Full-Stack Developer (Apprenticeship)

Technical Skills

Frontend: TypeScript, JavaScript, React, Redux, HTML, CSS

Backend: Java, Spring Boot, Microservices, REST APIs, WebSockets, Multithreading, JDBC, Node.js, Express

Databases: SQL, SQLite, MySQL, MongoDB

Tools: Git, GitHub, Maven, Postman, Jira

Practices: Agile/Scrum, Unit Testing (JUnit, Jest), Code Reviews, CI/CD, OOP, Design Patterns
